St John’s College Device Registration

This document describes how to register devices in the College’s Device Registration system.

This allows you to:
- connect an AP (personal wireless Access Point) to a wall socket in areas of the College where there is no eduroam wireless service.
- connect devices which are unable to connect to the eduroam network to the St John’s internal wireless network. These devices are things like wireless printers, AppleTV, Sonos sound systems and games consoles.

You will need to know login details for the system. This is different to your CRSID (Raven) credentials. These were provided to you in your Welcome Pack. The IT Department or Student Services can give these to you if you have mislaid them.

You will also need the Wireless MAC addresses of your hardware (google: ‘how to find MAC address for your make and model’) Along with eduroam username (University email address)

Registering new devices

1. Go to the webpage [https://vcppm1.joh.cam.ac.uk/guest/](https://vcppm1.joh.cam.ac.uk/guest/) Enter your login details.

2. Add your devices.
   - Device Name: enter a descriptive name for your device – e.g. iPhone 5s or Win 10 Dell
   - MAC Address: enter hardware address of your device. Google ‘how to find Mac address for Make and Model’ - e.g. - Make and Model being iPhone 5s or for your operating system – e.g. Windows 10
   - Tick ‘Enable AirGroup’
   - 4. And enter your Edroam user name (full cam email address) Into the ‘Shared With’ field.
   - 5. Click ‘Create Device’ when all info has been entered.

Repeat above steps for all devices.
Shared Devices (Apple TV, Wireless Printer etc)

- Once these “shared” devices are registered they will need to be connected to the St Johns internal wireless network.
- Hardware you would like to connect to these shared devices will also need to be registered but these can be joined to either the eduroam or the internal wireless networks.

Removing Devices

If you need to remove old devices select the manage tab, high light the device and click ‘remove’ then the ‘Delete account’, Select ‘make changes’ to complete the removal.
